Keywords: System, Sales

Abstract:

PT.ADITECH is a company engaged in the sale of equipment - electronic equipment at designated for individuals. Payment methods on these companies is divided into two ways, with maturities and credit or cash payment. By using the existing sales process and then sets out into the new system, with the goal of keeping the sales process is expected to improve.

Can be seen from the explanation of DFD context diagram and diagram Zero, ERD and Normalization, and component - component of data processing such as consumer goods. By limiting the problem is only on loan sale process, then made a simple program that uses Visual Basic 6.0 programming language that the authors proposed to assist the processing of data - the data mentioned above.
